

Performance on SSA Headline Indicators Baltimore City

Showing performance as of March 2025 (CFSR)

Version: 5/1/25 | CJAMS extract: 4/15/25

Data Dictionary: For more information about each indicator refer to the Data Dictionary available at

<https://docs.google.com/document/d/1aWUspHzMgVgKDSwWJ178gTbcFAACZ6ZKIZ-CaO5XtY9CM/edit>.

The Dictionary describes in detail how each indicator is defined, the children it includes, and other important notes.

Small counties & rare outcomes: In small counties or for indicators in which the outcome is rare, a change in one or two children can create a large change in performance, and a large percent change, from one period to the next. In these cases, such a large change may not be cause for alarm. See the data table (last page) for the actual number of children that were included in the calculation. If performance is not shown for a given period or indicator, it means there were no children eligible for the indicator and therefore no performance to report.

Questions & feedback: For questions about these dashboards or for suggestions to improve them, contact Maria Tillman at maria.tillman@maryland.gov or 443-845-0494.

Dashboard Schedule: This dashboard is updated every quarter to provide the most recent data available. For each update, performance is shown for a new "12-month cohort" of children. The cohorts used are as follows:

- 1 - CFSR - April to March of the following year (e.g., Apr 2021 - Mar 2022)
- 2 - SFY - July to June of the following year (e.g., Jul 2021 - Jun 2022)
- 3 - FFY - Oct to Sep of the following year (e.g., Oct 2021 - Sep 2022)
- 4 - CY - Jan to Dec of the same year (e.g., Jan 2022 - Dec 2022)

Entry rate = # of entries / child population * 1,000

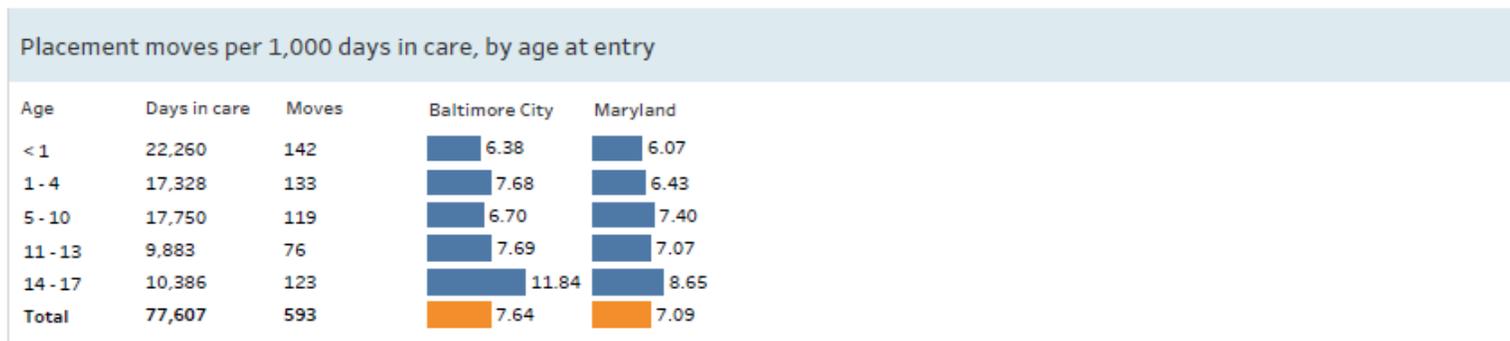

Child population data by race is from a special tabulation of the 2015-2019 American Community Survey (ACS) 5-year estimate (Citizen Voting Age Population [CVAP]).
 Child population data by age is from the National Center for Health Statistics (2020 Vintage Bridged-Race Postcensal Population Estimates). This file provides estimates of child populations in each county by single-year of age. As a result, the total child population shown may differ between the two sources.

Placement stability (moves/1,000 days in care) | Baltimore City (Apr '24 - Mar '25)

How many moves occurred for every 1,000 days that children (who entered during the year) were in care?

Placement rate = # of moves / # of days in care * 1,000

Placement rate = # of moves / # of days in care * 1,000
